

HOW BTP GETS YOU CLOSER TO YOUR INVOICE PROCESSING PROBLEMS AND SOLUTIONS

Join Dalrae Solutions' Sales Director Cheryl Jensen as she talks through how DalRae's "first mile scenario" methodology can streamline your invoice processing, using SAP's Business Technology Platform (BTP) at its core.

This business focused session will explain how using robotic processing automation (RPA) within the BTP platform enables you to extract data from incoming invoices in your inbox, and automatically populate this information into your SAP system.

Suitable for business users with a vested interest in making your finance function run more efficiently, this session will also include a Q&A session at the end, allowing you to ask how your specific invoice processing challenges could be solved.

HOW EFFICIENT IS YOUR INVOICING PROCESS?

Most organisations have agreed processes in place for invoicing, however experience tells us that they may not always be followed. There are on average 5 manual human steps involved before an invoice gets to your ERP for payment. Do you understand how efficient you are at paying your customers and vendors?

HOW CAN BTP HELP US IMPROVE THIS?

Using BTP along with DalRae's First Mile methodology allows you to get the correct information to the core quickly and accurately. By using RPA to automate with matching rules, remove up to 70% of manual processes immediately, improving the user experience to eliminate work arounds and modernise without affecting your core ERP functions

WHERE DOES AI COME INTO THIS?

The BTP platform enables the use of AI and Machine Learning, meaning you can not only handle the 30% of exceptions that need to go to a finance officer, but also reduce exceptions by automating the system to understand and learn the behaviors. This results in improving time to value, reducing risk and improving your internal and external customer value and reputation

HOW DOES THIS DELIVER VALUE?

By adopting a continual improvement approach, you can incorporate the broader SAP Process Intelligence, Optimisation and Governance tools, reducing overall cost of ownership. Utilising SAP Signavio for actionable insights enables users to model the wider process flows and improvements, which can then be actioned to increase productivity.

Improve Usability

BTP is purpose built to reduce complexity and improve business agility, for both business & operations.

Innovation Platform

Built for innovation, BTP is the best way to future proof your business and build resilience in today's world.

Transform Today

BTP is available now, with low cost to entry and fast time to value, it's ready to leverage today.
